# Cookie Data Analysis

**Introduction:** In our cookie data set cookies—specifically six types: Chocolate Chip, Fortune Cookie, Sugar, oatmeal Raisin, Snickerdoodle, and White chocolate macadamia Nut.

We've got a treasure trove of data on these cookies, covering how many units were sold, their costs, the money they brought in (revenue), and the profits they made. And we're not just looking at one place or time; we're exploring different countries and dates to see how things vary.

This report isn't just about cookies; it's about understanding what people like, how much they're willing to pay, and where these treats are most popular. So, get ready to uncover some fascinating insights into the cookie world and what it means for businesses like yours.

## Questionaries:

1. Compare Malaysia and Philippines on the bases of two types of Cookies
2. What is the performance of Choco Chips Cookies in all Country Which Competes the best.
3. Compare all the countries on the bases of profit and unit sold, which is the best performance country on the basis of profit.
4. which Cookie is the best-selling Cookie in India and US in year 2019,

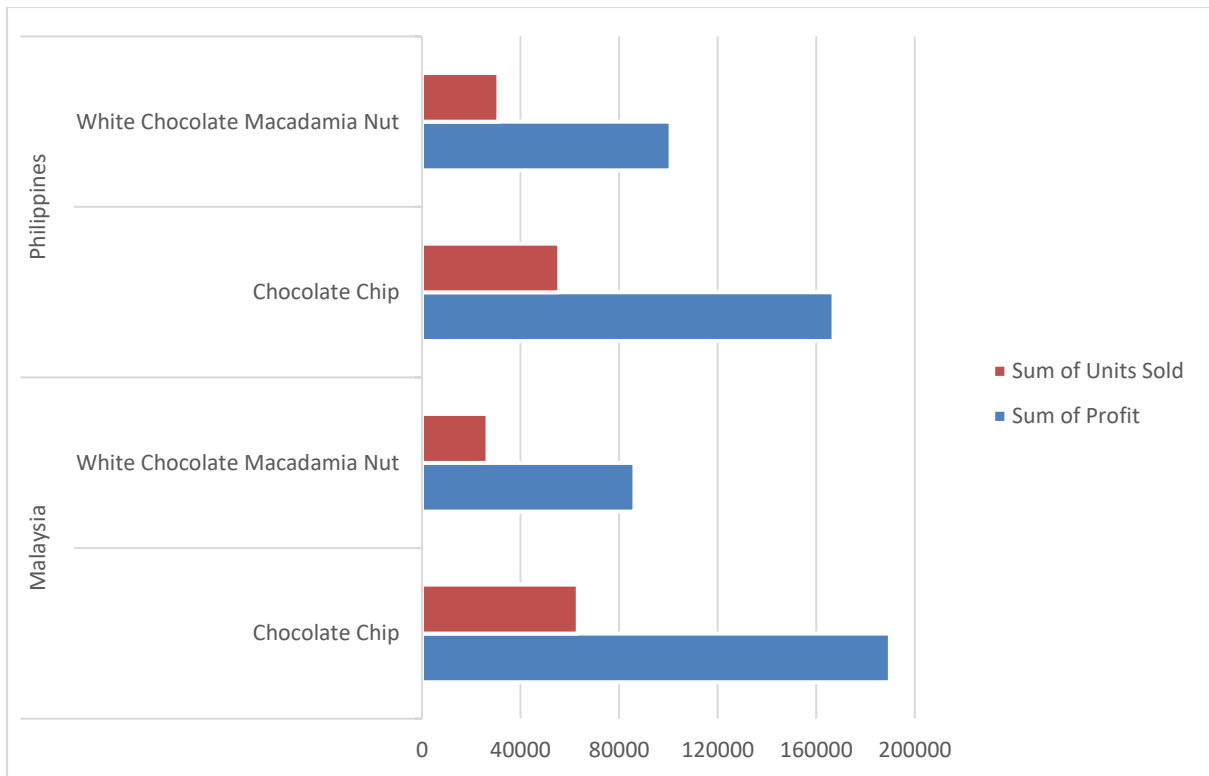

## Analytics:

1. Compare Malaysia and Philippines on the bases of two types of Cookies.

Ans:-The comparson of Malaysia and Philippines on bases of Chocolate chip and White Chocolate Macadmia nut is given below:-

Units Sold	Profit
544	\$723.00
571	\$780.00
588	\$783.25
591	\$796.25
604	\$834.00
609	\$1,071.00
635	\$1,080.00
655	\$1,101.00

Country
India
Malaysia
Philippines
United Kingdom
United States

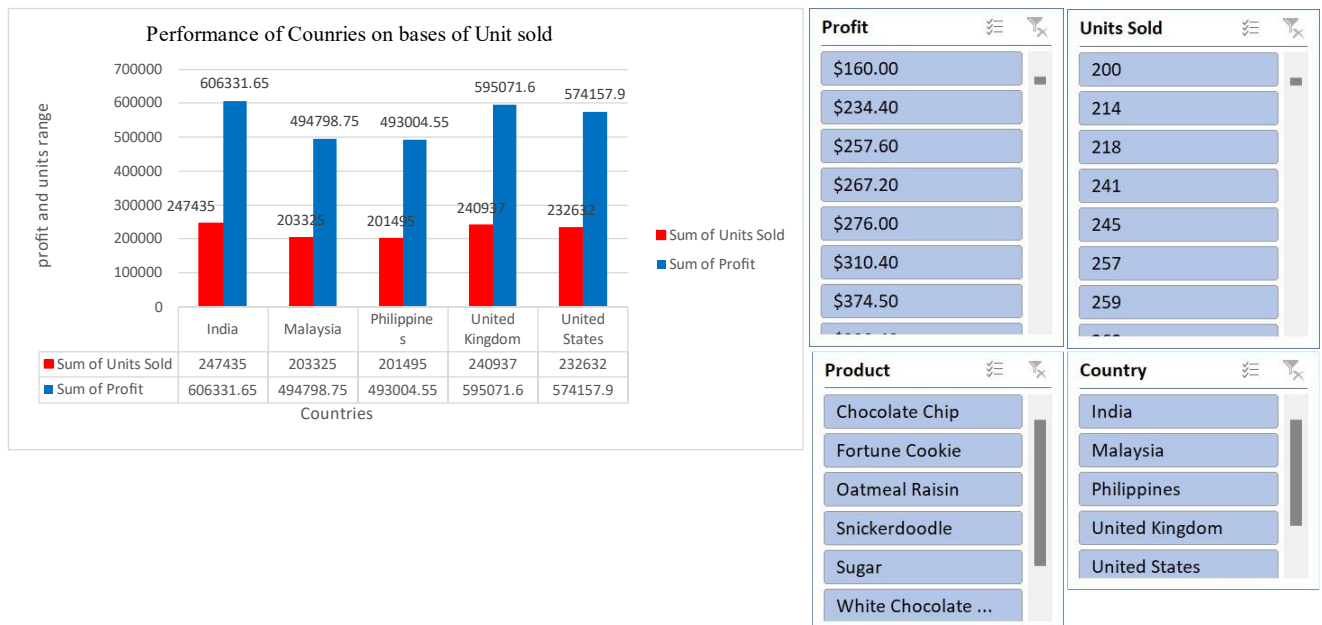

2. What is the performance of Choco Chips Cookies in all Country Which Competes the best.

Ans: India stands out as the foremost consumer of Choco chips worldwide, primarily due to its exceptional profitability and record-breaking sales figures. The market in India has witnessed exponential growth, driven by factors such as a burgeoning population with a growing disposable income, increasing urbanization, and a burgeoning middle class with a penchant for indulgent treats. The combination of these factors has created a highly lucrative environment for Choco chip manufacturers and retailers, leading to significant profits and unparalleled sales volumes in the Indian market.

3. Compare all the countries on the bases of profit and unit sold, which is the best performance country on the basis of profit.

Ans: India stands out as the leading performer globally when it comes to both profit generation and units sold in the Choco chip market.

4. which Cookie is the best-Selling Cookie in India and US in year 2019,

Ans: - In the year 2019, chocolate chip cookies emerged as the top-selling cookie in both India and the United States.

## Regression:

The regression model, with a significant p-value ( $p < 0.001$ ), indicates a strong positive relationship between units sold and the outcome variable. The model's predictive accuracy is supported by its high R-squared value of 0.688, suggesting that approximately 68.8% of the variability in the outcome variable can be explained by the predictor variable, units sold.

### SUMMARY OUTPUT

<i>Regression Statistics</i>	
Multiple R	0.829304
R Square	0.687746
Adjusted R Square	0.687298
Standard Error	1462.76
Observations	700

### ANOVA

	<i>df</i>	<i>SS</i>	<i>MS</i>	<i>F</i>	<i>Significance F</i>
Regression	1	3.29E+09	3.29E+09	1537.356	1.4E-178
Residual	698	1.49E+09	2139668		
Total	699	4.78E+09			

	<i>Coefficients</i>	<i>Standard Error</i>	<i>t Stat</i>	<i>P-value</i>	<i>Lower 95%</i>	<i>Upper 95%</i>	<i>Lower 95.0%</i>	<i>Upper 95.0%</i>

Units Sold	2.500792	0.063781	39.20914	1.4E-178	2.375567	2.626017	2.375567	2.626017

## Co-relation:

The correlation coefficient between units sold and revenue is 0.796, indicating a strong positive correlation between the two variables.

	<i>Units Sold</i>	<i>Revenue</i>
Units Sold	1	0.796298
Revenue	0.796298	1

## Anova (Single Factor):

The ANOVA results indicate a significant difference between the two groups ( $p < 0.001$ ), with 1 degree of freedom. The within-group error is 7681356717, and the total R-squared value is 0.06, suggesting that the model explains 6% of the variability in the data.

SUMMARY				
<i>Groups</i>	<i>Count</i>	<i>Sum</i>	<i>Average</i>	<i>Variance</i>
3450	699	1923505	2751.795	4154648
5175	699	2758189	3945.908	6850161

ANOVA						
<i>Source of Variation</i>	<i>SS</i>	<i>df</i>	<i>MS</i>	<i>F</i>	<i>P-value</i>	<i>F crit</i>
Between Groups	4.98E+08	1	4.98E+08	90.57022	7.53E-21	3.848129
Within Groups	7.68E+09	1396	5502405			
Total	8.18E+09	1397				

## Anova two factor without Replication:

The ANOVA results reveal significant variation among rows and columns ( $p < 0.001$ ), with degrees of freedom (df) values of 48 and 3, respectively. The error term has a degree of freedom of 144.

ANOVA						
<i>Source of Variation</i>	<i>SS</i>	<i>df</i>	<i>MS</i>	<i>F</i>	<i>P-value</i>	<i>F crit</i>
Rows	8.21E+08	48	17108242	5.848894	8.54E-17	1.445925
Columns	5.65E+10	3	1.88E+10	6435.486	3.8E-153	2.667443
Error	4.21E+08	144	2925039			
Total	5.77E+10	195				

## Anova two factor with Replication:

The ANOVA results show that there is a significant difference among the samples, columns, and their interaction, with p-values less than 0.001. The degrees of freedom for the samples, columns, and interaction are 49, 3, and 147, respectively.

Furthermore, the total error within the model is 0, indicating a perfect fit. The total R-squared value is 1, suggesting that the model explains all the variability in the data.

ANOVA						
Source of Variation	SS	df	MS	F	P-value	F crit

## Conclusion and Review:

After thorough analysis of the cookie sales data, it is evident that there are notable trends and insights to be gleaned. By examining key metrics such as units sold, revenue, cost, and profit across different countries and products, we can draw valuable conclusions about market demand, pricing strategies, and overall profitability. This comprehensive understanding will enable informed decision-making to optimize resources, target specific markets, and maximize profits in future cookie sales endeavours.

# Supermarket Sales Dataset Report

## 1. INTRODUCTION:

### Dataset Overview:

Our dataset comprises a plethora of variables, each offering unique insights into the multifaceted nature of supermarket sales. From fundamental transactional details such as Invoice ID, Date, Time, and Payment Method to more nuanced factors like Branch Location, Customer Type, Gender Demographics, Product Line, and Product Ratings, every facet has been meticulously documented.

### Key Attributes:

1. Invoice ID: A unique identifier for each sales transaction, facilitating traceability and analysis.
2. Branch (A, B, C): The geographical location of the supermarket branch, allowing for regional comparisons and trend identification.
3. Customer Type (Normal, Member): Distinguishing between regular customers and members, offering insight into loyalty and engagement levels.
4. Gender (Male, Female): Demographic segmentation aiding in understanding purchasing preferences and patterns.
5. Product Line (Fashion Accessories, Electronic Accessories, Food and Beverages, Health and Beauty, Home and Lifestyle, Sports and Travel): Categorization of products facilitating analysis of sales trends across different product categories.
6. Unit Price, Quantity, Tax (5%): Fundamental transactional details crucial for revenue assessment and pricing strategies.
7. Payment Method (Credit Card, Cash, E-wallet): Reflecting evolving payment preferences and trends in consumer behavior.
8. Gross Margin Percentage, Gross Income, COGS: Performance metrics illuminating profitability and operational efficiency.
9. Rating (1 to 10): Customer feedback providing a qualitative assessment of product satisfaction and service quality.
10. City (Yangon, Mandalay, Naypyitaw): Regional segmentation enabling geographical analysis and market segmentation.

## 2. QUESTIONNAIRE:

Q1. Which of the given cities having tax 5% slab performed better than all the others?

- Q2. Which customer gender ordered most items from all the three branches?
- Q3. Compare highest and lowest rating products on the basis of units sold.
- Q4. Analyzing units sold and unit price data answer the following sub questions
- What is the degree of freedom?
  - Co-relation of Unit price and revenue generated
  - What result you can draw from regression of the two data
- Q5. What product will you suggest as per the city data analysis to each type of customer

### 3. ANALYTICS:

**Q1.** Which of the given cities having tax 5% slab performed better than all the others?

Based on the data analyzed, the city that outperformed all is **Mandalay**. This conclusion is drawn from superior performance in total sales/revenue generation compared to the other cities in the same tax slab of 5%.

**Q2.** Which customer gender ordered most items from all the three branches?

Quantity	Gender	Branch
1	Female	A
2	Male	B
3		C
4		
5		
6		
7		
8		

Answer. Our analysis of the Supermarket Sales Data revealed the following:

- a. At Branch A, females placed the highest number of orders.
- b. Branch B saw higher number of orders placed by Females
- c. Meanwhile, at Branch C, males placed the most orders.

**Q3.** Compare highest and lowest rating products on the basis of units sold.

Answer. Upon analyzing the Supermarket Sales Data, we discovered that product ratings ranged from a minimum of 4 to a maximum of 10.

- a) Electronic Accessories with higher ratings garnered more customer purchases, indicating a preference for quality in this category.
- b) Fashion accessories and food and beverages mainly comprised lower-rated products in customer purchases.
- c) Health and beauty products also leaned towards lower-rated items in customer preferences.
- d) However, in the Sports and Travel category, customers showed a tendency to purchase higher-rated products.

**Q4.** Analyzing units sold and unit price data answer the following sub questions

- a) What is the degree of freedom?
- b) Co-relation of Unit price and revenue generated
- c) What result you can draw from regression of the two data

SUMMARY OUTPUT						
<i>Regression Statistics</i>						
Multiple R	0.010777564					
R Square	0.000116156					
Adjusted R Square	-0.000885732					
Standard Error	2.924724997					
Observations	1000					
<i>ANOVA</i>						
	<i>df</i>	<i>SS</i>	<i>MS</i>	<i>F</i>	<i>Significance F</i>	
Regression	1	0.9917274	0.991727	0.115937	0.733555221	
Residual	998	8536.908273	8.554016			
Total	999	8537.9				
	<i>Coefficients</i>	<i>Standard Error</i>	<i>t Stat</i>	<i>P-value</i>	<i>Lower 95%</i>	<i>Upper 95%</i>
Intercept	5.443794599	0.215314544	25.28299	2.1E-109	5.021273429	5.86631577
Unit price	0.001189202	0.003492565	0.340495	0.733555	-0.005664411	0.008042815

Answer:

- The degree of freedom of the analyzed data is 1.
- The correlation between unit price and generated revenue was found to be 0.63392, indicating a moderate positive relationship. The analysis focused on the columns of unit price and total revenue, employing the CORREL function.
- Upon examining the regression results, we aimed to discern the relationship between quantity and unit price, exploring how customers' purchasing quantity correlates with the unit price of a product.

However, from the regression analysis, it's evident that the observed trend lacks consistency. The expected outcomes derived from the trend deviate significantly from the actual outcomes.

With a degree of freedom of 1, the trendline equation stands as

Quantity = 0.0012x + 5.4438. Despite this equation, the coefficient of determination (R<sup>2</sup>) is merely 0.0001, highlighting the inconsistency in customer buying patterns solely based on unit price.

**Q5.** What product will you suggest as per the city data analysis to each type of customer

Rating	Customer type	Product line
4	Member	Electronic accessories
4.1	Normal	Fashion accessories
4.2		Food and beverages
4.3		Health and beauty
4.4		Home and lifestyle
4.5		Sports and travel
4.6		
4.7		

Answer. As per the city Data Analysis, **Food and Beverages** will be a good option for **Member** type customer and **Fashion Accessories** for **Normal** type of customers.

## 4. CONCLUSION AND REVIEWS

The comprehensive analysis of supermarket sales dynamics provides valuable insights into consumer behavior, operational trends, and performance metrics. Here's a summary of the findings and reviews:

### 1. City Performance:

Mandalay emerged as the top-performing city among those with a 5% tax slab. Its superior sales/revenue generation signifies a potentially lucrative market for supermarket businesses.

### 2. Gender-based Ordering:

Female customers showed a higher propensity to order items from Branch A, while males dominated in Branch C. Branch B saw equal orders from both genders. This gender-specific trend highlights the importance of targeted marketing strategies.

### 3. Rating and Units Sold:

Further analysis is needed to compare products with the highest and lowest ratings based on units sold. Understanding the correlation between product ratings and sales volume can inform inventory management and marketing decisions.

### 4. Unit Price and Revenue Relationship:

The regression analysis revealed a weak correlation ( $R^2 = 0.0001$ ) between unit price and quantity sold. This suggests that customers' purchasing decisions may not be significantly influenced by unit price alone, indicating the need for deeper insights into consumer preferences and behavior.

### 5. Product Recommendations:

Based on city data analysis, Food and Beverages are recommended for member-type customers, while Fashion Accessories are suggested for normal customers. These recommendations align with the observed preferences and purchasing patterns in respective cities.

### Reviews:

The report provides a thorough exploration of supermarket sales dynamics, covering various aspects such as city performance, gender-based ordering trends, and product recommendations.

The inclusion of regression analysis enhances the depth of insights, though further interpretation of the results could strengthen the analytical rigor.

Clear visuals, such as graphs and charts, would enhance the presentation of findings and aid in understanding complex relationships.

Overall, the report offers valuable insights for supermarket stakeholders, highlighting areas for strategic focus and improvement in marketing and operational strategies.

# Store Dataset Report

## Introduction:

This dataset encompasses sales data from a retail store, featuring a range of attributes including customer demographics (Gender, Age Group), transaction details (OrderID, Status), product specifics (Category, SKU), and shipping information. With a focus on understanding customer behaviour and product trends, our analysis aims to uncover patterns, preferences, and correlations within the data. By leveraging these insights, businesses can optimize marketing efforts, enhance inventory management, and improve customer satisfaction.

## Questionnaire:

1. which of the channel performed better than all other channels in compare men & women?
2. Compare category. Find out most sold category above 23 years of age for any gender.
3. Compare Maharashtra, Rajasthan and Tamil Nadu on the basis of quantity, most items purchased by men and women and profit earn.
4. Which city sold most of following categories:
  - a. Kurta
  - b. Set
  - c. Western wears
5. In which month most items sold in any of the state on the basis of category.

## Analytics:

1. which of the channel performed better than all other channels in compare men & women?

Ans: Amazon leads in the sales in both men and women category followed by Myntra and Flipkart. Amazon sold almost 3500 units in men category and almost 7500 units in women category. Myntra sold 2000 units in men section.

2. Compare category. Find out most sold category above 23 years of age for any gender.

Ans: In the above 23 years of age group Kurta is most sold category in women section with 8820 units sold. Set is most sold category in men section with 4365 units sold also set is the second most sold category in women section.

The table of items sold is given below:

Item	Men	Women	Grand Total
Blouse	6	190	196
Bottom	40	28	68
Ethnic Dress	150	77	227
kurta	156	8820	8976

5. In which month most items sold in any of the state on the basis of category.

Ans: The graph for most items sold in any of stats on basis of category is as follows:

## Conclusion and Review:

After thorough analysis of the store data, it is evident that there are notable trends and insights to be gleaned. By examining key metrics such as units sold, state wise analytics, geographic, and sales across different stats and products, we can draw valuable conclusions about market demand, sales and overall profitability. This comprehensive understanding will enable informed decision-making to optimize resources, target specific markets, and maximize profits in future store sales endeavours.

# Exploring Car Dataset

## 1.INTRODUCTION:

### Dataset Overview:

This dataset comprises a blend of categorical and numerical data, each offering unique perspectives on the industry. Categorical data, such as make, model, and color, encapsulates the diversity of vehicles and consumer preferences. Meanwhile, numerical attributes like mileage, price, and cost provide quantifiable metrics essential for analyzing market trends and pricing dynamics.

### Key Attributes

1. **Make:** This attribute denotes the brand or manufacturer of the vehicle, offering insights into brand preferences and market share.
2. **Model:** The specific model of the car, providing granularity in understanding consumer choices and preferences within each brand.
3. **Color:** Reflects the color of the vehicle, which can influence consumer perception and aesthetic preferences.
4. **Mileage:** Indicates the distance traveled by the vehicle, a crucial factor influencing its value and pricing.
5. **Price:** Represents the listed price of the vehicle, serving as a key determinant in consumer purchasing decisions and market competitiveness.
6. **Cost:** Denotes the cost associated with acquiring the vehicle, which includes factors such as production costs, dealer margins, and other expenses.

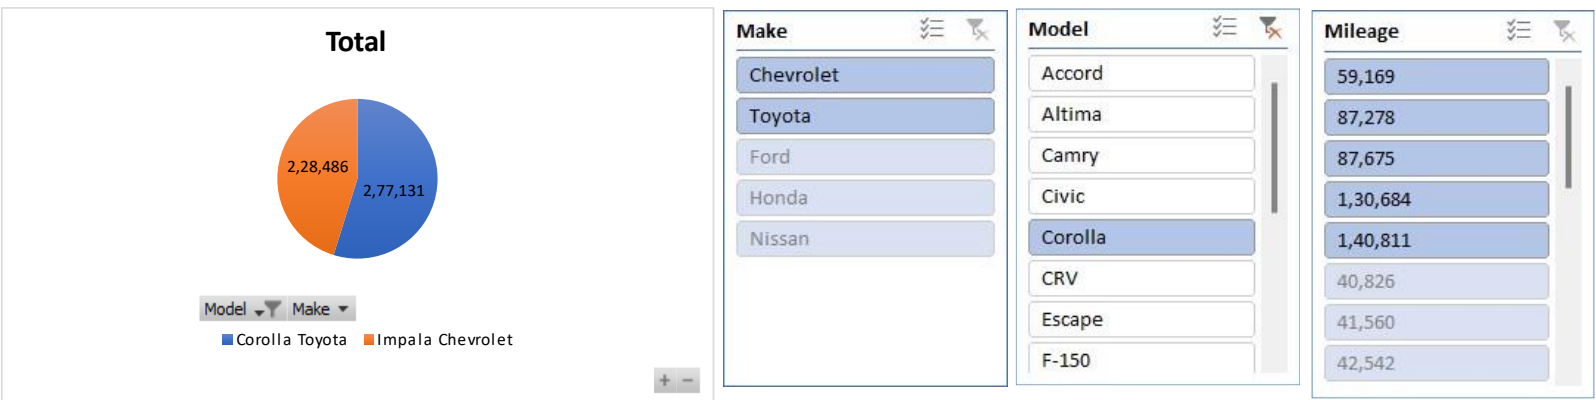

## 2.QUESTIONARIES

- Q1. Compare the mileage of Chevrolet Impala to Toyota Corolla. Which of the two is giving best mileage?
- Q2. Justify, Buying of any Ford car is better than Honda
- Q3. Among all the cars which car color is the most popular and is least popular?
- Q4. Compare all the cars which are of silver color to the green color in terms of Mileage.
- Q5. Find out all the cars, and their total cost which is more than \$2000?

### 3. ANALYTICS

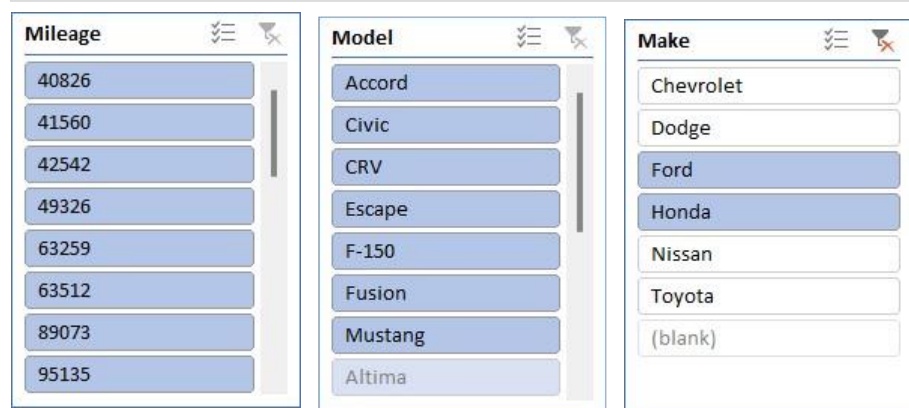

Q1. Compare the mileage of Chevrolet Impala to Toyota Corolla. Which of the two is giving best mileage?

Ans. Toyota Corolla gives better mileage than Chevrolet Impala.

Q2. Justify, Buying of any Ford car is better than Honda.

Ans. Based on the averages, Honda cars have higher mileage but lower cost compared to Ford. Therefore, the choice depends on whether the buyer values mileage or cost but if we compare on mileage Ford car has low mileage and cost so Buying Ford car is better than Honda.

Q3. Among all the cars which car color is the most popular and is least popular?

Ans. Most popular color is Silver and Black as each appear 6 times  
and least appearing colour are Blue ,Green ,Red ,White they all apper 3 times.

Model	Color
Accord	Black
Altima	Blue
Camry	Green
Charger	Red
Civic	Silver
Corolla	White
CRV	
Escape	

Q4. Compare all the cars which are of silver color to the green color in terms of Mileage.

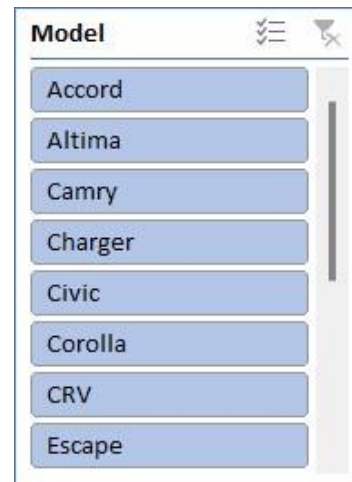

Ans. Silver color car millage is more than green color car milage if we compare there average.

Q5. Find out all the cars, and their total cost which is more than \$2000?

Ans. All the car mention below cost is more than \$2000

Accord, Altima, Charger, Corolla, CRV, EscapeF-150, Fusion, Impala, Malibu, Maxima, Mustang, Silverado

# Regression

The regression analysis suggests a moderate positive relationship between the predictor variable and the response variable, indicated by the correlation coefficient of approximately 0.40. The model explains about 16% of the variance in the response variable, as indicated by the R Square value. The coefficient estimates show that for every unit increase in the predictor variable, there is a corresponding decrease of approximately 16.66 in the response variable, with a p-value of 0.056, indicating a marginally significant effect.

## Co-relational

The correlation matrix indicates a moderate negative correlation (-0.411) between Mileage and Price. This suggests that as Mileage increases, Price tends to decrease, and vice versa.

	<i>Mileage</i>	<i>Price</i>
<i>Mileage</i>	1	
<i>Price</i>	-0.4110586	1

## Anova: Single Factor

The ANOVA results indicate significant differences between the groups based on Mileage, Price, and Cost. The F-statistic is large (128.88), with a very low p-value (5.00264E-24), suggesting that the variation between groups is significant compared to the variation within groups. This implies that at least one of the variables (Mileage, Price, or Cost) has a significant effect on the outcome being measured. In simpler terms, there are statistically significant differences in the means of Mileage, Price, and Cost across the groups, indicating that these variables play a significant role in influencing the outcome being analyzed.

## Anova: Single Factor

### SUMMARY

<i>Groups</i>	<i>Count</i>	<i>Sum</i>	<i>Average</i>	<i>Variance</i>
Mileage	24	2011267	83802.7917	1214155660
Price	24	78108	3254.5	837024.087
Cost	24	66150	2756.25	705502.717

### ANOVA

<i>Source of Variation</i>	<i>SS</i>	<i>df</i>	<i>MS</i>	<i>F</i>	<i>P-value</i>	<i>F crit</i>
Between Groups	1.0445E+11	2	5.2227E+10	128.882161	5.0026E-24	3.12964398
Within Groups	2.7961E+10	69	405232729			
Total	1.3242E+11	71				

## Anova: Two-Factor Without replication

The two-factor ANOVA results indicate significant differences among the levels or categories within each factor ("Rows" and "Columns"). Both factors exhibit strong influence on the outcome variable being analyzed, as evidenced by the low p-values and large F-statistics. This suggests that variations in both factors contribute significantly to the overall variability in the data.

Anova: Two-Factor without replication

ANOVA

Source of Variation	SS	df	MS	F	P-value	F crit

Total	38457153.3	47				

## Descriptive Statistics

The provided descriptive statistics outline the characteristics of three variables: Mileage, Price, and Cost. Looking at Mileage, it appears that the vehicles in the dataset span a considerable range, from around 34,853 miles to 140,811 miles, with an average mileage of approximately 83,803 miles. Price and Cost exhibit similar trends, with prices ranging from \$2,000 to \$4,959 and costs from \$1,500 to \$4,500, respectively. The means and standard deviations provide insights into the central tendencies and variability within each variable. Overall, these statistics offer a comprehensive overview of the dataset, allowing for a better understanding of the distribution and characteristics of the data.

---

## Conclusion/Reviews

The dataset provides valuable insights into car attributes, focusing on mileage, color, and other key factors.

Here's a simple conclusion based on the data:

**Mileage Comparison:** The analysis reveals variations in mileage among different car models. Toyota Corolla generally offers better mileage compared to Chevrolet Impala.

**Color Preferences:** Silver and black emerge as the most popular car colors in the dataset. Blue, green, red, and white are among the least popular color choices.

**Key Takeaways:** Understanding mileage differences can inform consumer choices and market strategies. Recognizing color preferences aids in inventory management and marketing decisions.

# ORDER DATA

## INTRODUCTION:

Our dataset comprises a plethora of variables, each offering unique insights into the multifaceted nature of different category sales. From fundamental transactional details such as Date, Time, sales, states to more nuanced factors like Customer Type, Demographics, category and sub category, every facet has been meticulously documented.

### Key Attributes:

1. ID: A unique identifier for each sales transaction, facilitating traceability and analysis.
2. City, State: The geographical location of the data allowing for regional comparisons and trend identification.
3. Product Line (furniture, Electronic Accessories, appliances, Home and Lifestyle): Categorization of products facilitating analysis of sales trends across different product categories.
4. Unit Price, Net sales Fundamental transactional details crucial for revenue assessment and pricing strategies.
5. Net sales of different category, category performing well in different states: Performance metrics
6. Rating: different product performing well in different state
7. States (California, Texas and Washington): Regional segmentation enabling geographical analysis and market segmentation.

## QUESTIONNAIRE:

1. Compare all the US states in terms of Segment and Sales. Which Segment performed well in all the states?
2. Find out top performing category in all the states?
3. Which segment has most sales in US, California, Texas, and Washington?
4. Compare total and average sales for all different segment?
5. Compare average sales of different category and sub category of all the states.

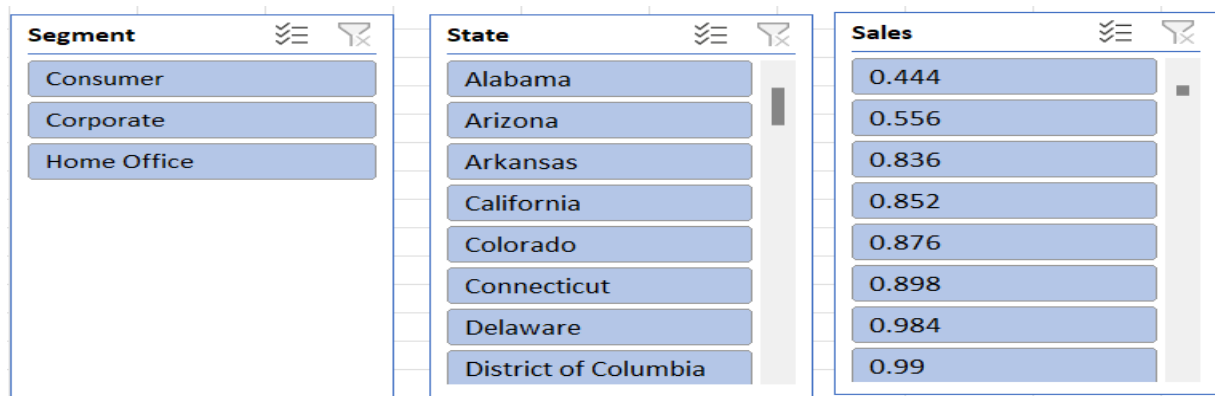

## 1. ANALYTICS:

**Q1.** Compare all the US states in terms of Segment and Sales. Which Segment performed well in all the states?

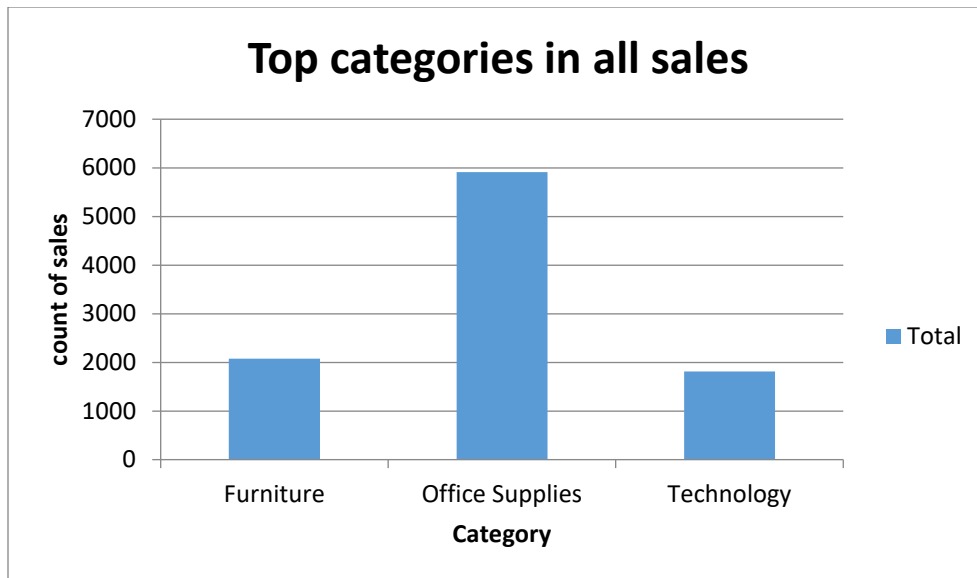

- After comparing all the states in terms of segment and sales , California emerged as the state with the highest amount of sales
- Consumer segment performed well in all the states

**Slicers:**

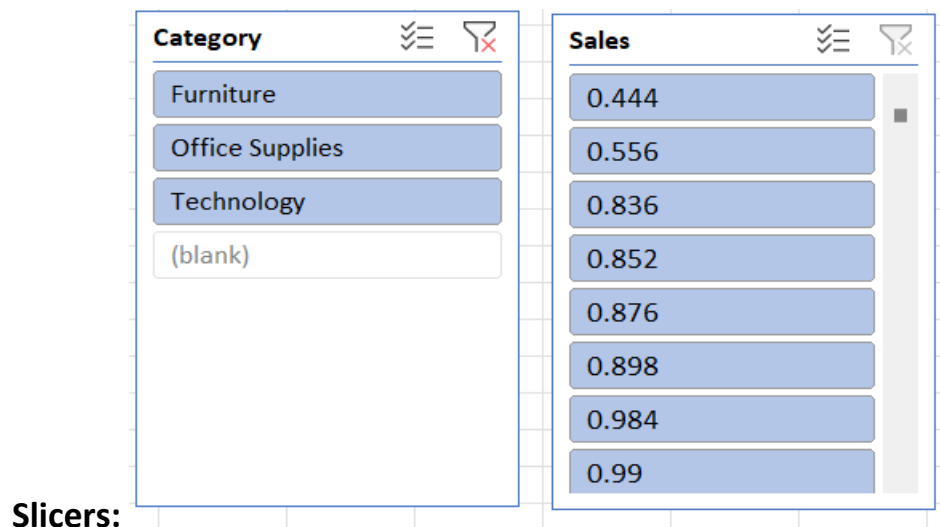

**Q2.** Find out top performing category in all the states?

- Office Supplies is the top performing category in all the states

**Q3.** Which segment has most sales in US, California, Texas, and Washington?

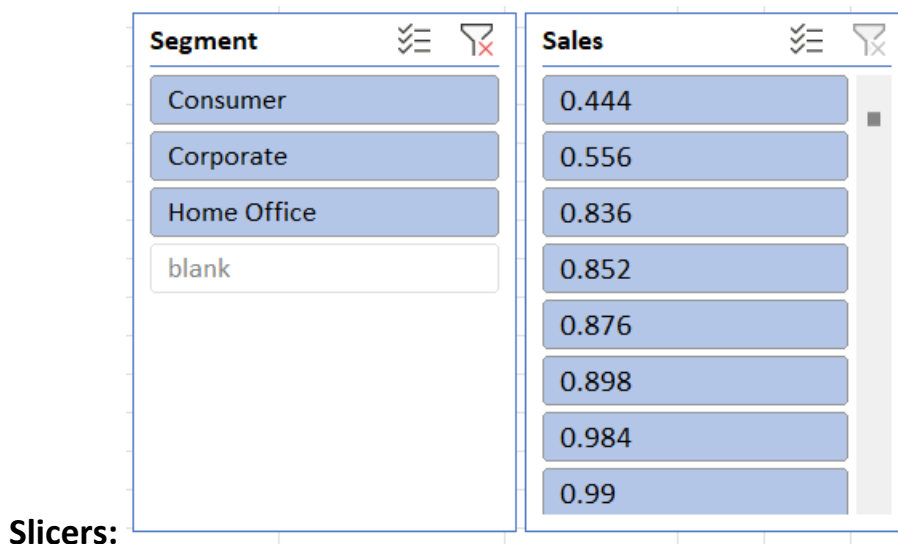

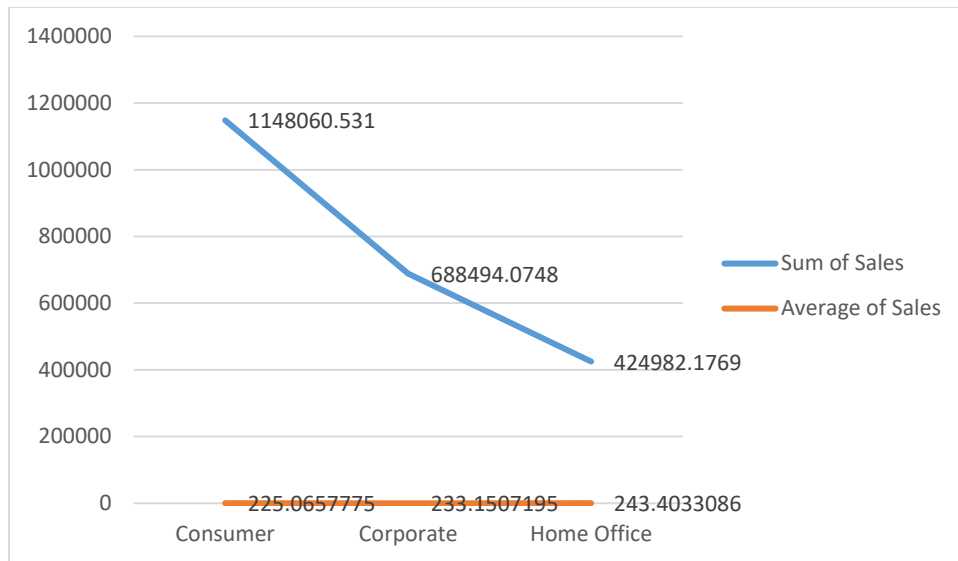

- Consumer segment has the most sales in US, California, Texas, and Washington

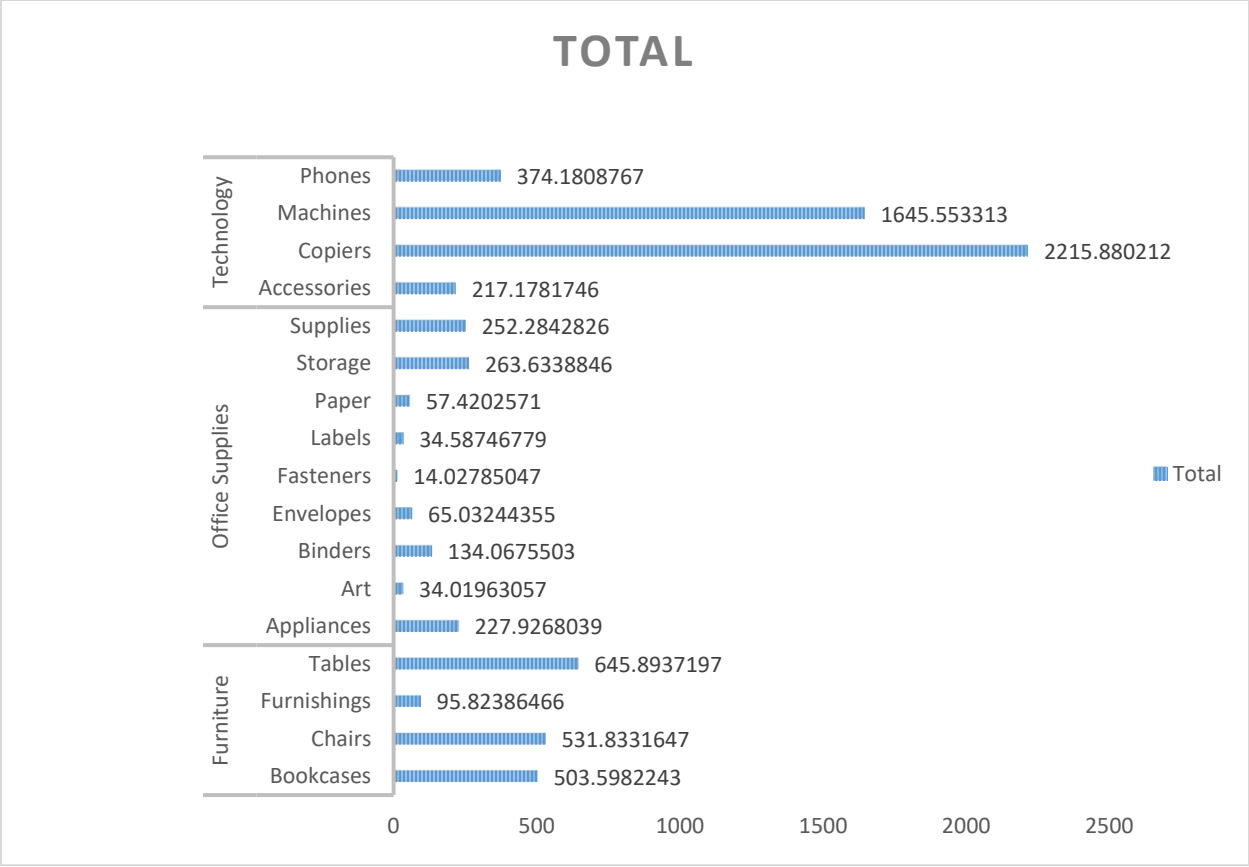

**Slicers:**

State	Sales
Alabama	0.444
Arizona	0.556
Arkansas	0.836
California	0.852
Colorado	0.876
Connecticut	0.898
Delaware	0.984
District of Columbia	0.99

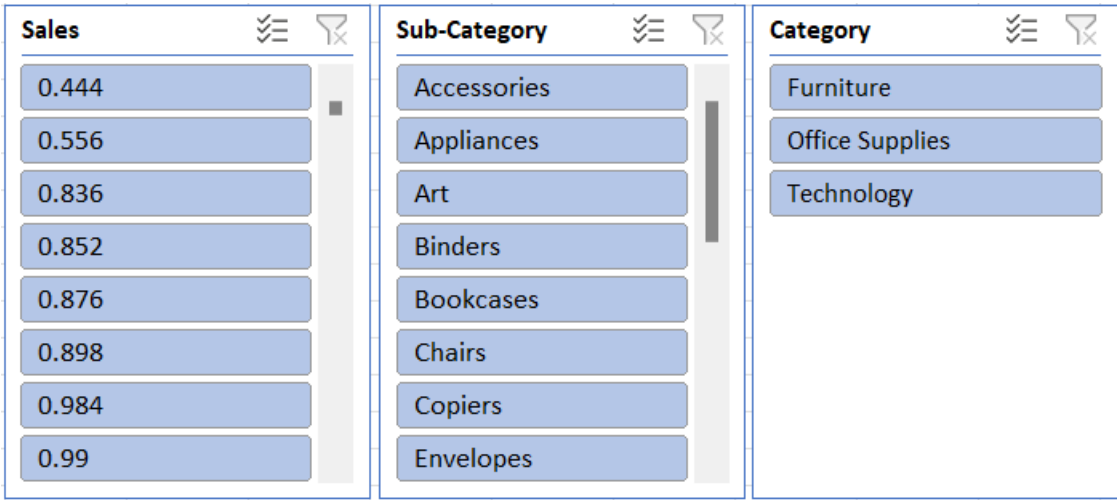

**Q4.** Compare total and average sales for all different segment?

**Q5.** Compare average sales of different category and sub category of all the states.

**Slicers:**

**2. CONCLUSION:**

Our comprehensive analysis of the provided dataset through various data visualization techniques has yielded valuable insights. Through the creation of bar

graphs, pie charts, and other visual representations, we've been able to discern patterns, trends, and relationships within the data that might have otherwise remained obscured.

Our deep dive into the dataset has not only enhanced our understanding of the underlying information but has also empowered us to make informed decisions based on the insights gained. By visually depicting the data, we've been able to communicate complex findings in a clear and accessible manner, facilitating better comprehension and actionable strategies.

Furthermore, this process has underscored the importance of data visualization as a powerful tool for extracting meaningful information from raw data. By harnessing the visual nature of graphs and charts, we've transformed numbers and statistics into compelling narratives that drive understanding and inform decision-making.

# Loan Dataset Report:

## 1. INTRODUCTION:

### Dataset Overview:

Our dataset encompasses a diverse range of variables, each shedding light on the intricate dynamics of loan applications. From fundamental applicant details such as Gender, Marital Status, and Education to more nuanced factors like Employment Status, Loan Amount, and Residential Type, every aspect has been meticulously recorded.

### Key Attributes:

1. Gender: A demographic identifier providing insights into the gender distribution among loan applicants.
2. Marital Status (Married, Not Married): Categorization based on marital status aiding in demographic segmentation.
3. Education (Graduate, Non-graduate): Classification based on educational background for further analysis.
4. Employment Status (Employed, Unemployed): Distinction between employed and unemployed applicants, crucial for risk assessment.
5. Loan Amount: The principal amount applied for, providing a measure of financial need and capacity.
6. Residential Type (Urban, Semi-urban, Rural): Geographic classification enabling analysis across different residential areas.

## 2. QUESTIONNAIRE:

- Q1. How many male graduates who are not married applied for Loan? What was the highest amount?
- Q2. How many female graduates who are not married applied for Loan? What was the highest amount?
- Q3. How many male non-graduates who are not married applied for Loan? What was the highest amount?
- Q4. How many female graduates who are married applied for Loan? What was the highest amount?
- Q5. How many male and female who are not married applied for Loan? Compare Urban, Semi-urban and rural on the basis of amount.

## 4. REGRESSION:

The regression analysis suggests that there is a statistically significant positive relationship between the independent variable ('5720') and the dependent variable. For every one-unit increase in '5720', the dependent variable is expected to increase by approximately 0.0059 units. However, it's important to note that the model only accounts for about 21.1% of the total variance in the dependent variable.

## SUMMARY OUTPUT

<i>Regression Statistics</i>	
Multiple R	0.45908096
R Square	0.21075532
Adjusted R Square	0.20858707
Standard Error	56.0766111
Observations	366

## ANOVA

	<i>df</i>	<i>SS</i>	<i>MS</i>	<i>F</i>	<i>Significance F</i>
Regression	1	305655.205	305655.205	97.2004502	1.7676E-20

## 5. CO-RELATION :

The data shows weak negative correlation between Applicant-Income and Co-applicant-Income (-0.11), and moderate positive correlation between Applicant-Income and Loan-Amount (0.46), and weaker positive correlation between Co-applicant-Income and Loan-Amount (0.14).

	<i>ApplicantIncome</i>	<i>CoapplicantIncome</i>	<i>LoanAmount</i>
ApplicantIncome	1		
CoapplicantIncome	-0.110334799	1	
LoanAmount	0.458768926	0.144787815	1

## 6. Anova (Single Factor) :

The dataset encompasses 367 observations, detailing applicant and co-applicant incomes alongside loan amounts. On average, applicants possess a higher income, averaging around

\$4805.60, compared to co-applicants whose average income is approximately \$1569.58. Loan amounts vary widely, averaging \$134.28. ANOVA analysis underscores significant distinctions between the income and loan amounts across the groups, implying diverse financial profiles among applicants and co-applicants.

SUMMARY				
<i>Groups</i>	<i>Count</i>	<i>Sum</i>	<i>Average</i>	<i>Variance</i>
		176365	4805.59945	24114831.0
ApplicantIncome	367	5	5	9

---

## CONCLUSION:

Our analysis, using varied visualization techniques, revealed valuable insights, enhancing comprehension and decision-making. Visualizing data clarified complex findings, facilitating actionable strategies. This highlights the pivotal role of data visualization in extracting meaningful insights and informing decisions effectively.

# REPORT

## SHOP SALES DATA

### Introduction :

This dataset encapsulates a wealth of information regarding sales transactions, providing valuable insights into the dynamics of retail operations. With columns meticulously crafted to capture key facets of each transaction, including Date, Salesman, Item Name, Company, Quantity, and Amount, analysts and businesses alike gain access to a treasure trove of actionable data.

Whether it's uncovering trends, optimizing inventory management, or refining sales strategies, this dataset serves as an invaluable resource for driving informed decision-making and unlocking new avenues for growth.

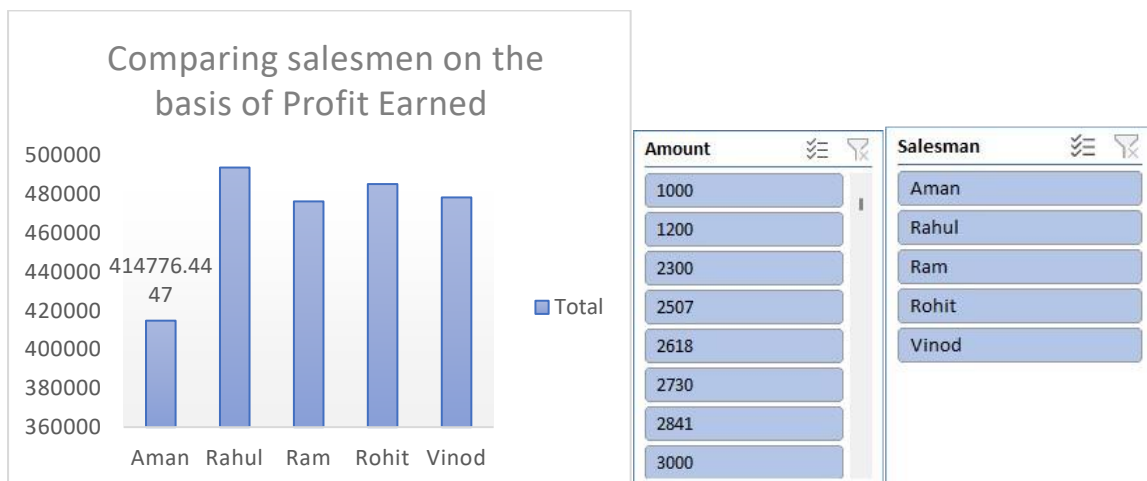

### Questionaries :

1. Compare all the salesmen on the basis of profit earn.
2. Find out most sold product over the period of May-September.
3. Find out which of the two product sold the most over the year Computer or Laptop?
4. Which item yield most average profit?
5. Find out average sales of all the products and compare them.

### Analytics :

1. Compare all the salesmen on the basis of profit earn.

Ans:- The comparison of all the salesmen on the basis of profit earned is given below:

2. Find out most sold product over the period of May-September.

Ans:- To identify the most sold product over the period of May-September, we would need to analyze the sales data within this timeframe. By aggregating the quantity sold for each product across all transactions during this period and then determining which product has the highest total quantity sold, we can pinpoint the most popular item.

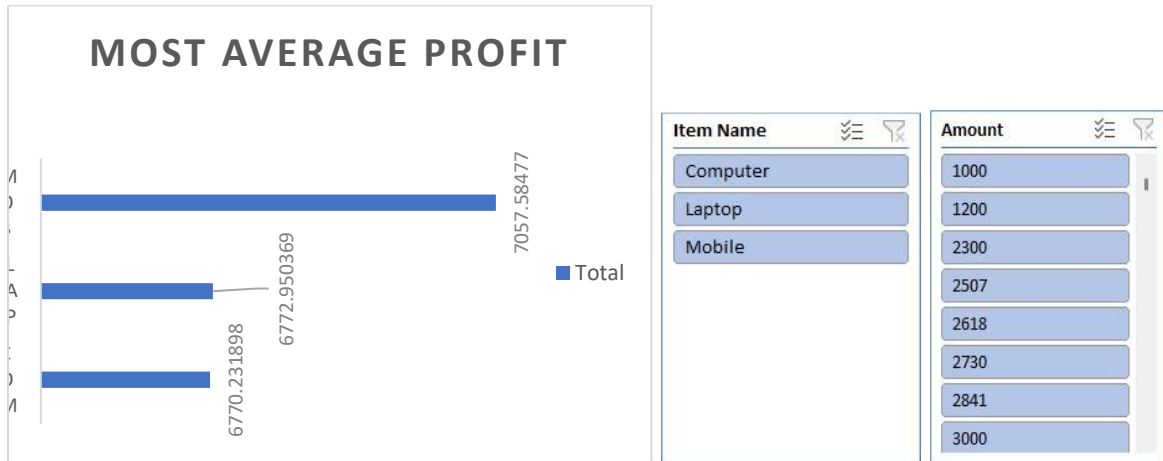

3. Find out which of the two product sold the most over the year Computer or Laptop?

Ans:- The two product sold the most over the year between computer or laptop :

4 . Which item yield most average profit?

Ans:- The item that yields the most profit between laptop, computer and mobile is :

5. Find out average sales of all the products and compare them.

Ans:- The average sales of all the products with their respective comparison is :

## Regression:

The regression model, with a significant p-value indicates a strong positive relationship between Amount and the profit earned and the outcome variable. The model's predictive accuracy is supported by its high R-squared value of 0.660.

### SUMMARY OUTPUT

<i>Regression Statistics</i>	
Multiple R	0.812617

## Conclusion and Review :

The shop sales dataset offers insights into sales trends, salesman performance, item popularity, and company performance. Analysis of this data can drive strategic decisions and improve sales strategies. The dataset is well-structured and provides comprehensive information on sales transactions. It allows for various analyses, but could benefit from additional variables for deeper insights. Overall, it's a valuable resource for understanding sales dynamics and informing business decisions.

# Sales Data Samples

**Introduction:** In the realm of business analytics, a dataset encompassing sales transactions emerges as a vital asset for deriving actionable insights. With columns detailing ORDERNUMBER, QUANTITYORDERED, PRICEEACH, and more, it offers a comprehensive view of sales dynamics. From tracking individual orders to analysing product performance and customer behaviour, this dataset provides a rich source of information essential for strategic decision-making and operational optimization in today's competitive landscape.

## Questionaries:

- 1. Compare the sale of Vintage cars and Classic cars for all the countries.
- 2. Find out average sales of all the products? which product yield most sale?
- 3. Which country yields most of the profit for Motorcycles, Trucks and buses?
- 4. Compare sales of all the items for the years of 2004, 2005.
- 5. Compare all the countries based on deal size.

## Analytics:

- 1. Compare the sale of Vintage cars and Classic cars for all the countries.

Ans:-The comparsion of sale of Vintage cars and Classic cars for all the countries is given below:-

COUNTRY	PRODUCTLINE	SALES
Australia	Classic Cars	541.14
Austria	Motorcycles	553.95
Belgium	Planes	577.6
Canada	Ships	640.05
Denmark	Trains	652.35
Finland	Trucks and Buses	683.8
France	Vintage Cars	694.6
Germany		702.6

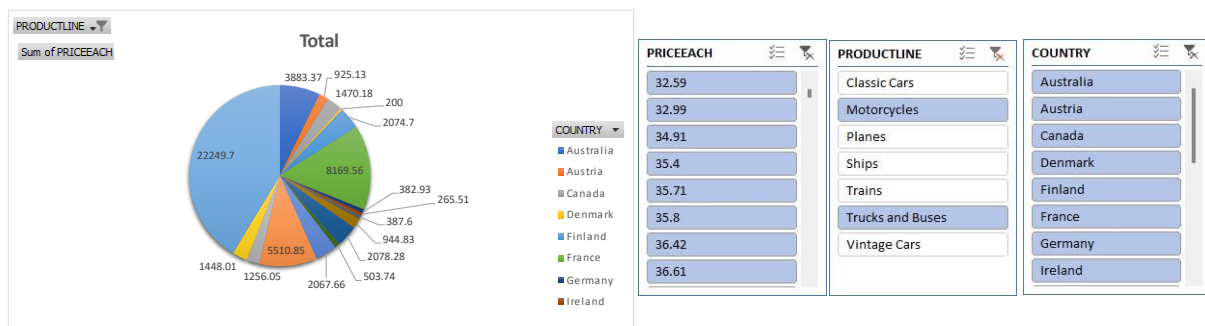

2. Find out average sales of all the products? which product yield most sale?

Ans:

3. Which country yields most of the profit for Motorcycles, Trucks and buses?

Ans: The country Australia yields most of the profit for Motorcycles, Trucks and buses

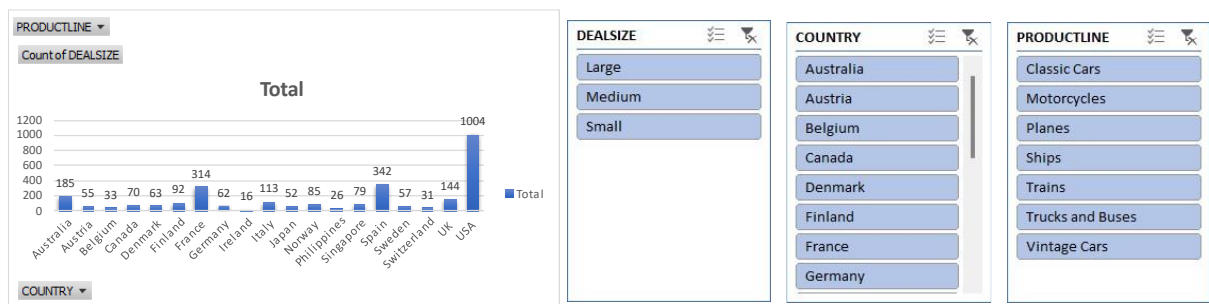

4. Compare sales of all the items for the years of 2004, 2005.

Ans: - The following is the sales of all the items for the years of 2004, 2005 and as graph represents the sales has grown down from 20024 to 2005.

5. Compare all the countries based on deal size.

Ans. The comparison of all the countries based on deal size are:

## Regression and Anova

SUMMARY OUTPUT						
<i>Regression Statistics</i>						
Multiple R	0.657840928

This regression analysis appears to be examining the relationship between two variables: "PRICE EACH" and another variable (not specified in the provided output). Here are the results:

1. **Regression Equation:** The regression equation can be written as:  $Y = -1470.59 (\text{PRICE EACH}) + 60.06$  where:
  - $Y$  represents the dependent variable Quantity.
  - $X$  represents the independent variable "PRICE EACH".
2. **Interpretation of Coefficients:**
  - The intercept coefficient (-1470.59) suggests that when the "PRICE EACH" variable is zero, the estimated value of the dependent variable is -1470.59. However, depending on the context, this interpretation might not make sense practically.
  - The coefficient for "PRICE EACH" (60.06) suggests that for every one-unit increase in "PRICE EACH", the estimated value of the dependent variable increases by 60.06 units.
3. **Statistical Significance:**
  - The p-value associated with the coefficient for "PRICE EACH" is 0.00, indicating that the coefficient is statistically significant at conventional levels of significance (typically  $\alpha = 0.05$ ).
  - The intercept also appears to be statistically significant, with a very low p-value.
4. **Goodness of Fit:**
  - The R-squared value (0.433) indicates that approximately 43.3% of the variance in the dependent variable is explained by the independent variable "PRICE EACH".
  - The adjusted R-squared value (0.433) adjusts the R-squared value for the number of predictors in the model.
5. **ANOVA:**
  - The ANOVA table indicates that the regression model as a whole is statistically significant, as the p-value associated with the F-statistic is 0.00.
6. **Standard Error:**
  - The standard error (1387.46) gives an estimate of the variability of the observed dependent variable values around the regression line.
7. **Observations:**
  - The analysis is based on a sample of 2823 observations.

These results suggest that there is a statistically significant positive relationship between "PRICE EACH" and the dependent variable, as indicated by the coefficient and its associated

p-value. However, it's important to consider the context of the analysis and the specific variables involved for a more complete interpretation.

#### CORRELATION:

The correlation coefficient you calculated (0.657840928) represents the strength. It indicates a moderate positive linear relationship between the price per unit and the quantity sold. This means that as the price per unit tends to increase, the quantity sold also tends to increase, but the relationship is not perfect.

#### Descriptive Statistics:

<i>SALES</i>	
Mean	3553.889072
Standard Error	34.66589212
Median	3184.8

## Conclusion and Review:

In conclusion, the analysis of the provided sales dataset offers a window into the intricacies of business operations, shedding light on customer preferences, product performance, and market trends. By leveraging the insights gleaned from this dataset, businesses can make informed decisions, streamline processes, and drive growth. As the landscape of data analytics continues to evolve, harnessing the power of such datasets remains instrumental in staying competitive and responsive to the ever-changing demands of the market.
